

USER STORIES & ACCEPTANCE CRITERIA FOR KAISER PERMANENTE

(1)

USER STORIES & ACCEPTANCE CRITERIA				
FEATURES	USER STORY	ACCEPTANCE CRITERIA	FUNCTIONAL REQUIREMENTS	NON-FUNCTIONAL REQUIREMENTS
	1.1 PREDICT NO-SHOWS • As a clinic scheduler I want to see a no-show risk score for each upcoming appointment So that I can proactively intervene (reminders, double-booking, outreach)	• Risk score displayed as Low / Medium / High • Score generated in <300ms via API • Score updates when appointment data changes • Model accuracy $\geq 75\%$ on validation set • Ability to filter schedule by risk level	• Must classify appointments into risk categories • Must support retraining with new data • Must generate explainability outputs (SHAP or similar)	Performance • API latency <300ms • Dashboard loads <5 seconds Security • HIPAA-compliant data handling • Encryption in transit and at rest Scalability • Support 15 clinics → scalable to 30+ • Handle 10,000+ daily

1. PREDICTIV E NO-SHOW INTELLIGEN CE				predictions Reliability • 99.5% API uptime • Automated pipeline monitoring Usability • Dashboard intuitive for non-technical staff • Mobile-friendly layout
	1.2 TRIGGER AUTOMATE D REMINDERS As a patient engagement coordinator I want high-risk patients to receive automated reminders So that we reduce	• High-risk patients receive SMS/email reminders • Outreach logs stored in data warehouse • Staff can view outreach history • Opt-out preference		

	no-show rates.	s respected		

2. OPERATIONAL ANALYTICS & DATA WAREHOUSE	1. UNIFIED DATA MODEL As a data analyst I want a centralized star schema So that I can run consistent data checks, retrievals, updates and reports across all clinics	• Fact tables: Appointments, Providers, Clinics, Patients • Dimensions : Date, Time, Provider, Clinic, Patient • Data refreshes daily • Data quality checks (null %, duplicates, schema validation)	• Must ingest data from EHR, scheduling, and patient systems • Must maintain historical snapshots Must support star schema queries	
	1. UTILIZATION DASHBOARD As a clinic manager	• Utilization displayed by provider, clinic, and week	• Must support filtering by clinic,	

	I want a dashboard showing provider utilization so that I can balance workloads and reduce burnout	• Color-coded thresholds (e.g., <60%, 60–85%, >85%) • Drill-down to appointment-level detail • Export to CSV	provider, date range • Must show no-show trends, utilization, wait times • Must allow exporting reports	
3. PREDICTION API	3.1 REAL TIME API As a scheduling system I want to call a prediction API so that I can display risk scores and predictions instantly	• API returns response in <300ms • Accepts JSON payload with appointment features • Returns risk score + explanation (top 3 features) • Logs all API calls	• Must authenticate via token • Must validate input schema • Must log errors and latency
